Proofs

Lean Prover

Lean

What is Lean?

Lean is an open source theorem prover written in C++ being developed at Microsoft Research and Carnegie Mellon University by Leonardo de Moura in 2013, with a small trusted kernel based on dependent type theory.

- ▶ Aims to bridge the gap between interactive and automated theorem proving.
- ▶ Is a functional programming language.
- ▶ Consists mainly of defining types and functions.
- ▶ *Mathlib* is a mathematical library in constant development by the community.
- ▶ The Fields Medal, Peter Scholze and Terence Tao, recently used (2023) Lean as a proof assistant.

Petri nets

Net

Definitions

Let two disjoint sets $\mathcal{P}$ of *places* and $\mathcal{T}$ of *transitions*.

A **net** is a 4-tuple $N = (S_N, T_N, \bullet -_N, -\bullet_N)$ where

- ▶ $S_N \subseteq \mathcal{P}$ is the nonempty set of places,
- ▶ $T_N \subseteq \mathcal{T}$ is the set of transitions, and
- ▶ $\bullet -_N, -\bullet_N : T_N \rightarrow 2^{S_N}$ are functions that assign source and target to each transitions such that $\bullet t \neq \emptyset$ and $t\bullet \neq \emptyset$ for all $t \in T_N$.

Example

Net: $N = (S_N, T_N, \bullet -_N, -\bullet_N)$

Example

Net: $N = (S_N, T_N, \bullet -_N, -\bullet_N)$

$$S_N = \{a, b, c, d, e, f, g\}$$

Example

Net: $N = (S_N, T_N, \bullet -_N, -\bullet_N)$

$$S_N = \{a, b, c, d, e, f, g\}$$

$$T_N = \{t_1, t_2, t_3, t_4\}$$

Petri Nets

Definition

A *marked* of a net N is a multiset over S_N , i.e., $m \in \mathbb{N}^{S_N}$.

A **Petri net** is a pair (N, m) where N is a net and m is a marking of N .

Example

Petri net: $(N, a \oplus b \oplus c)$

Petri nets

Preset and postset

For every transition $t \in T_N$ such that the *preset* is $\bullet t = s_1$ and the *postset* is $t\bullet = s_2$, then we write $s_1[t]s_2$, where $s_1, s_2 \subseteq S_N$.

And for every place $a \in S_N$, we define the preset and postset of a place respectively $\bullet a := \{t \mid a \in t\bullet\}$ and $a\bullet := \{t \mid a \in \bullet t\}$.

The sets ${}^\circ N := \{a \in S_N \mid \bullet a = \emptyset\}$ and $N^\circ := \{a \in S_N \mid a\bullet = \emptyset\}$ are the *initial* and *final* elements of N .

Example

Petri net: $(N, a \oplus b \oplus c)$

► $t_1 \in T_N$, $\bullet t_1 = \{a\}$ and $t_1 \bullet = \{d\}$ then $\{a\}[t_1]\{d\}$.

Example

Petri net: $(N, a \oplus b \oplus c)$

- ▶ $t_1 \in T_N$, $\bullet t_1 = \{a\}$ and $t_1 \bullet = \{d\}$ then $\{a\}[t_1]\{d\}$.
- ▶ $t_2 \in T_N$, $\bullet t_2 = \{b\}$ and $t_2 \bullet = \{e\}$ then $\{b\}[t_2]\{e\}$.

Example

Petri net: $(N, a \oplus b \oplus c)$

- ▶ $t_1 \in T_N$, $\bullet t_1 = \{a\}$ and $t_1 \bullet = \{d\}$ then $\{a\}[t_1]\{d\}$.
- ▶ $t_2 \in T_N$, $\bullet t_2 = \{b\}$ and $t_2 \bullet = \{e\}$ then $\{b\}[t_2]\{e\}$.
- ▶ $t_3 \in T_N$, $\bullet t_3 = \{d, c\}$ and $t_3 \bullet = \{f\}$ then $\{d, c\}[t_3]\{f\}$.

Net morphisms

Definition

Let N, N' be nets. A pair $f = (f_S, f_T)$ is a **net morphism** from N to N' (written $f : N \rightarrow N'$) where $f_S : S_N \rightarrow S_{N'}$ and $f_T : T_N \rightarrow T_{N'}$, if

$$f_S(\bullet \mathbf{t}_N) = \bullet (f_T(\mathbf{t}))_{N'}$$

and

$$f_S(\mathbf{t}_N^\bullet) = (f_T(\mathbf{t}))_{N'}^\bullet$$

The operational semantic of a Petri net is given by the following inference rule:

$$\frac{\text{(FIRING)} \quad \mathbf{t} = m \mid m' \in T_N}{(N, m \oplus m'') \xrightarrow{\mathbf{t}} (N, m' \oplus m'')}$$

Example

Firing: (N , $a \oplus b \oplus c$)

Example

Firing: $(N, a \oplus b \oplus c) \xrightarrow{t_1} (N, d \oplus b \oplus c)$

Example

Firing: $(N, a \oplus b \oplus c) \xrightarrow{t_1} (N, d \oplus b \oplus c) \xrightarrow{t_3} (N, f \oplus b)$

Example

Firing: $(N, a \oplus b \oplus c) \xrightarrow{t_1} (N, d \oplus b \oplus c) \xrightarrow{t_3} (N, f \oplus b) \xrightarrow{t_2} (N, f \oplus e)$

Example

Firing: $(N, a \oplus b \oplus c) \xrightarrow{t_1} (N, d \oplus b \oplus c) \xrightarrow{t_3} (N, f \oplus b) \xrightarrow{t_2} (N, f \oplus e)$

We write this sequence by $s = t_1; t_3; t_2$.

A Petri net (N, m) with preset, postset, initial and final elements, morphisms, and operational semantics is a P/T **net**.

Sequence

Definition

For a sequence $s = t_1; t_2; \dots; t_n$ we denote $(N, m_0) \xrightarrow{s} (N, m_n)$ if

$$(N, m_0) \xrightarrow{t_1} (N, m_1) \xrightarrow{t_2} \dots \xrightarrow{t_n} (N, m_n).$$

We write $(N, m_0) \rightarrow^* (N, m_n)$ if there is a sequence s such that $(N, m_0) \xrightarrow{s} (N, m_n)$ and ϵ_m for the empty sequence. We call s a *firing sequence*.

Let (N, m) a P/T net. We define the **reachable marking** as the set

$$reach(N, m) = \{m' \mid (N, m) \rightarrow^* (N, m')\}$$

Example

Reachable marking

Let's find all the sequence $(N, a \oplus b \oplus c) \rightarrow^* (N, m')$.

Example

Reachable marking

Let's find all the sequence $(N, a \oplus b \oplus c) \rightarrow^* (N, m')$.

► $m' = a \oplus b \oplus c, \epsilon_m$.

Example

Reachable marking

Let's find all the sequence $(N, a \oplus b \oplus c) \rightarrow^* (N, m')$.

► $m' = a \oplus b \oplus c, \epsilon_m.$

► $m' = d \oplus b \oplus c, s = t_1$

Example

Reachable marking

Let's find all the sequence $(N, a \oplus b \oplus c) \rightarrow^* (N, m')$.

- ▶ $m' = a \oplus b \oplus c, \epsilon_m.$
- ▶ $m' = d \oplus b \oplus c, s = t_1.$
- ▶ $m' = f \oplus b, s = t_1; t_3.$

Example

Reachable marking

Let's find all the sequence $(N, a \oplus b \oplus c) \rightarrow^* (N, m')$.

- ▶ $m' = a \oplus b \oplus c, \epsilon_m.$
- ▶ $m' = d \oplus b \oplus c, s = t_1.$
- ▶ $m' = f \oplus b, s = t_1; t_3.$
- ▶ $m' = f \oplus e, s = t_1; t_3; t_2.$

Example

Reachable marking

Let's find all the sequence $(N, a \oplus b \oplus c) \rightarrow^* (N, m')$.

- ▶ $m' = a \oplus b \oplus c, \epsilon_m.$
- ▶ $m' = d \oplus b \oplus c, s = t_1.$
- ▶ $m' = f \oplus b, s = t_1; t_3.$
- ▶ $m' = f \oplus e, s = t_1; t_3; t_2.$
- ▶ $m' = a \oplus e \oplus c, s = t_2.$

Example

Reachable marking

Let's find all the sequence $(N, a \oplus b \oplus c) \rightarrow^* (N, m')$.

- ▶ $m' = a \oplus b \oplus c, \epsilon_m.$
- ▶ $m' = d \oplus b \oplus c, s = t_1.$
- ▶ $m' = f \oplus b, s = t_1; t_3.$
- ▶ $m' = f \oplus e, s = t_1; t_3; t_2.$
- ▶ $m' = a \oplus e \oplus c, s = t_2.$
- ▶ $m' = a \oplus g, s = t_2; t_4.$

Example

Reachable marking

Let's find all the sequence $(N, a \oplus b \oplus c) \rightarrow^* (N, m')$.

- ▶ $m' = a \oplus b \oplus c, \epsilon_m.$
- ▶ $m' = d \oplus b \oplus c, s = t_1.$
- ▶ $m' = f \oplus b, s = t_1; t_3.$
- ▶ $m' = f \oplus e, s = t_1; t_3; t_2.$
- ▶ $m' = a \oplus e \oplus c, s = t_2.$
- ▶ $m' = a \oplus g, s = t_2; t_4.$
- ▶ $m' = d \oplus g, s = t_2; t_4; t_1.$

Example

Reachable marking

Let's find all the sequence $(N, a \oplus b \oplus c) \rightarrow^* (N, m')$.

- ▶ $m' = a \oplus b \oplus c, \epsilon_m$.
- ▶ $m' = d \oplus b \oplus c, s = t_1$.
- ▶ $m' = f \oplus b, s = t_1; t_3$.
- ▶ $m' = f \oplus e, s = t_1; t_3; t_2$.
- ▶ $m' = a \oplus e \oplus c, s = t_2$.
- ▶ $m' = a \oplus g, s = t_2; t_4$.
- ▶ $m' = d \oplus g, s = t_2; t_4; t_1$.
- ▶ $m' = d \oplus c \oplus e, s = t_2; t_1$.

Example

Reachable marking

Let's find all the sequence $(N, a \oplus b \oplus c) \rightarrow^* (N, m')$.

- ▶ $m' = a \oplus b \oplus c, \epsilon_m.$
- ▶ $m' = d \oplus b \oplus c, s = t_1.$
- ▶ $m' = f \oplus b, s = t_1; t_3.$
- ▶ $m' = f \oplus e, s = t_1; t_3; t_2.$
- ▶ $m' = a \oplus e \oplus c, s = t_2.$
- ▶ $m' = a \oplus g, s = t_2; t_4.$
- ▶ $m' = d \oplus g, s = t_2; t_4; t_1.$
- ▶ $m' = d \oplus c \oplus e, s = t_2; t_1.$
- ▶ $m' = f \oplus e, s = t_2; t_1; t_3.$

Example

Reachable marking

Let's find all the sequence $(N, a \oplus b \oplus c) \rightarrow^* (N, m')$.

- ▶ $m' = a \oplus b \oplus c, \epsilon_m.$
- ▶ $m' = d \oplus b \oplus c, s = t_1.$
- ▶ $m' = f \oplus b, s = t_1; t_3.$
- ▶ $m' = f \oplus e, s = t_1; t_3; t_2.$
- ▶ $m' = a \oplus e \oplus c, s = t_2.$
- ▶ $m' = a \oplus g, s = t_2; t_4.$
- ▶ $m' = d \oplus g, s = t_2; t_4; t_1.$
- ▶ $m' = d \oplus c \oplus e, s = t_2; t_1.$
- ▶ $m' = f \oplus e, s = t_2; t_1; t_3.$
- ▶ $m' = d \oplus g, s = t_2; t_1; t_4.$

P/T nets in Lean

P/T in Lean

Structure

Petri net

```
structure Net ( $\alpha$  : Type) ( $\beta$  : Type) where  
  post :  $\beta \rightarrow \text{Multiset } \alpha$   
  pre :  $\beta \rightarrow \text{Multiset } \alpha$   
  cons_prod : ( $\forall t$ , pre t  $\neq \emptyset \wedge$  post t  $\neq \emptyset$ )
```

P/T net

```
structure MarkedNet ( $\alpha$  : Type) ( $\beta$  : Type) extends Net  $\alpha \beta$  where  
   $m_0$  : Multiset  $\alpha$ 
```

inductive Pl | a | b | c | d | e | f

def pre : Tr → Multiset Pl

| t₁ => {a}
| t₂ => {b}
| t₃ => {d,c}
| t₄ => {c,e}

def post : Tr → Multiset Pl

| t₁ => {d}
| t₂ => {e}
| t₃ => {f}
| t₄ => {g}

def cons_prod : ∀ t : Tr, pre t ≠ ∅ ∧ post t ≠ ∅ := by
 intro t
 cases h: t; all_goals unfold pre post; simp

Example

P/T net in Lean

Finally, our net is defined by

```
def  $N$  : Net Pl Tr := {  
  pre := pre,  
  post := post,  
  cons_prod := cons_prod  
}
```

```
def  $M$  : MarkedNet Pl Tr := {  
  toNet :=  $N$ ,  
   $m_0$  := {a,b,c}  
}
```

Reversing occurrence nets

Reversing nets

Definition

Let O be an occurrence net. The reversible version of O is $\overleftarrow{O} = (S_{\overleftarrow{O}}, T_{\overleftarrow{O}}, \bullet_{\overleftarrow{O}}, \overline{\bullet}_{\overleftarrow{O}})$ defined as follows:

$$S_{\overleftarrow{O}} = S_O$$

$$T_{\overleftarrow{O}} = T_O \cup \{ \overleftarrow{t} \mid t \in T_O \}$$

$$\bullet_{\overleftarrow{O}} t = \begin{cases} \bullet t_O & \text{if } t \in T_O \\ t_O^\bullet & \text{otherwise} \end{cases}$$

$$t_{\overleftarrow{O}}^\bullet = \begin{cases} t_O^\bullet & \text{if } t \in T_O \\ \bullet t_O & \text{otherwise} \end{cases}$$

Example

Reversing net

N

Example

Reversing net

$\overleftarrow{N}$

Definition

Reversing nets in Lean

```
structure Reversible (α: Type) (β: Type) extends Net α (β × TransitionType) :=  
  welldef : ∀ t': (β × TransitionType), t <~> t' → toNet • t = t' • toNet
```

Proofs

Properties using Lean

Comparison

Writing on paper:

Lemma (Loop Lemma). *Let O be an occurrence net. Then, $(\overleftarrow{O}, m) \xrightarrow{t} (\overleftarrow{O}, m')$ if and only if $(\overleftarrow{O}, m') \xrightarrow{\bar{t}} (\overleftarrow{O}, m)$.*

Writing in Lean:

```
lemma loop [DecidableEq α] (r: Reversible α β) {t t'} {m m': Multiset α}
  (o: t <~> t') :
  (∃ h: r.toNet : m [t] , (r.toNet : m [h] m'))
  ↔ (∃ h' : r.toNet : m' [t'] , (r.toNet : m' [h'] m)) := by
```
